

USB PC-camera PCVC730K

Let's Play

- **Have fun with camera games**
Create hilarious situations by using body language to control these games.
- **Add audio with the built-in USB microphone**
Record the sounds that came with the action.
- **Remote voice control**
Create snapshot by voice command.
- **Capture high quality video and still images**
Up to 30 frames per second streaming video can be captured in VGA resolution. Still images up to 800x600 pixels.

Let's make things better.

PHILIPS

USB PC-camera

Let's Play!

Philips' assurance for hours of video fun on your desktop.

With the ToUcam range, Philips sets the pace for how PC video cameras should look and perform in the future. Each camera in the ToUcam range has highly integrated components built into a really cute, compact bird-shaped housing. Everything about the ToUcam FUN is entertaining. From its funny design, included game application to the flawless operation, the ToUcam FUN has it all. Obviously at a quality you'd expect from an 'A' brand company

Have fun with camera games and create hilarious situations by using body language to control these games.

These are the first games that let you physically participate in the

game instead of controlling some character using a joystick or mouse. When you begin using GameCam, the big thrill is the ability to see yourself in the middle of the action. But as you get into the different games, you realize that the physical nature of GameCam makes for a gaming experience that is always fresh, fun and challenging.

Voice controlled snapshot

There's no longer a need to push a button to make a snapshot. Just smile and say "cheese". The camera will pick up this command and execute the snapshot function.
